Subject Index

A

Acetal homopolymer, fatigue behavior of, 548
Acetylene, polymerization, kinetics of, 635
Adhesives, pressure sensitive, humidity and temperature effects, 778
γ-Aminopropyl triethoxy silane, strength degradation in, primed α-Al_2O_3/nylon 6 peel joints, 1171
Antimony compounds, silane treated, flame retardation of polypropylene and, 434
α-Al_2O_3/nylon 6 peel joints, primed, strength degradation in γ-aminopropyl triethoxy silane, 1171
Aqueous polymer/surfactant systems, phase diagrams as formulation guide, 1110
Aromatic heterocyclic poly(5,5′-bibenzoaxazole-2,2′pr-diyl-1,4-phenylene), molecular orbital conformational energy calculations, 965

B

Berkeley kinetic network model, comment on, 782
Bimodal network, elastomeric properties of, 29
Binary alloys, nylon 6, ethylene-methacrylic acid copolymers and, 1124
Bisphenol-A- polycarbonate, impact strength, melt viscosity and, 896
Bore diameter, die angle and, entry pressure with bulk molding compound, 980
Break stretching ratio, polyethylenes, 279
Bubbles, formation mechanism, heat treatment, polymer films, 75

C

Calcium carbonate, polypropylene filled with, 1069
Calendering
molten polymer flow, 118
without lubrication approximation, 6
Capillary, die data, exit pressure effects, 669
Caprolactam
polymerization, rubber-modified polyamide during, 193
polymerization to nylon, 425
α-Caprolactam, activated anionic polymerization of, 1155
Carbon black
tensile properties of filled elastomers and, 909
viscosity of copolymers, 797
Chlorinated poly(vinyl chloride), miscibility, changes in chemical structure and, 1056
Cole-Cole method, flame retardant polycarbonate, 105
Composites, conductive, 507
Compounders, multi-screw, processing of reinforced plastics, 497
Computer studies
film blowing, 621
mathematical model, terephthalmic acid and ethylene glycol, esterification process between, 788
Conductive composites, 507
Conical dye, poly(arylетherketone) drawn through, 355
Controlled-ingredient-distribution mixing, rubber processing, 729
Copoly(carbonate imides), synthesis and properties of, 245
Copolyester blend, transparent polycarbonate, 462
Copolyesters
liquid crystalline, flow history effects, 377
thermotropic, molecular orientation and morphological texture, 888
Copolymer, methyl methacrylate styrene, mechanical and thermal properties, 1164
Copolymer blends, styrene-maleic-anhydride, impact strength and melt viscosity, 896
Copolymer-homopolymer mixtures, block, phase equilibria in, 1120
Copolymerization, multicomponent, one charge of comonomers, 987
Copolymers
block
damping modulus studies, 113
phase diagram of polymer blends, 1103
heterogeneous, equilibrium phase compositions of, 1081
nylon 6 and ethylene-methacrylic acid, binary alloys of, 1124
triblock, synthesis of poly(oxyethylene-styrene-oxyethylene), 32
viscosity, carbon black, 797
CPVC: *see* Chlorinated poly(vinyl chloride)
Craze, initiation, fatigue of poly(vinylchloride), 170
Crazing
polypropylene, 98
rubber particle size dependence of, 643
Creep, loading, Kevlar 29 fibers, 182
Crystalline polymers, crazing in, 98
Crystallinity, selection criteria, high density polyethylene, 562
Crystallization
anionic nylon 6, 425
nucleation of, polyester, 348

D

Dicyanate semi IPN's: *see* Polymer network
Die angle, bore diameter and, entry pressure with bulk molding compound, 980
DMS: *see* Dynamic mechanical spectroscopy
Ductile matrix, toughened plastics, 741
Dynamic mechanical spectroscopy, testing of practical plastic specimens, 923

E

Ehrenfest thermodynamic transitions, nucleation theory applied to, 1097
Elastomeric emulsion thermosetting, capillary extrusion of, 257
Elastomeric properties, bimodal networks, simultaneous curing-filling technique, 29
Elastomers
filler reinforced, tensile properties of, degree of mixing and carbon black effects, 909
polyester ether thermoplastic, properties of, 851
thermoplastic
metal flow behavior of, 630
structure-property relations, 834
Electromagnetic heating pattern, polymers, 289
Elongational viscosity, normal stresses and, entry vortex growth and extrudate swell, 677
Embrittlement, ductile polymers, 207
Entry vortex, growth, normal stress and elongational viscosity effects, 677
Environmental conditions, exposure to, polycarbonate, 577
Epoxide prepolymers, glass, diffusion of water, 419
Epoxy resin
cured system, mechanical properties, temperature-dependence of, 812
moisture diffusion, 521
response to dynamic contact loading, 339
rubber toughened, 1148
water in, 529
Equilibrium phase compositions, heterogeneous copolymers, 1081
Ethylene glycol, terephthalic acid and, esterification process between, model, 788
Ethylene-methacrylic acid, copolymers, binary alloys of , 1124
Exit pressure, capillary die data and, 669
Extrudate, swell, normal stress and elongational viscosity effects, 677
Extruder
single-screw
melting of polymers in, 585
melting performance, 412
mixing studies, 305
spiral disc
evaluation, 295
hydrodynamic analysis of, 589
negative flow in, hydrodynamic analysis of, 596
Extrusion
bars, void formation, 91
capillary, elastomeric emulsion, 257
polymer film, oriented structure forma-

tion during, 1179
Extrusion dies, inertia and gravitational effets, non-Newtonian fluids, 570

F

Fatigue, behavior of acetal homopolymer, 548
Fatigue crack propagation, polyethylene, 313
Film
blowing, computer study, 621
embossing process, 698
isotactic polypropylene, axial and off-axis yield behavior, 875
polymer, extrusion, 1179
Flame retardation, polypropylene, 434
Flory-Huggins theory, system polystyrene-polybutadiene-chloroform, 934
Fluorosilicone elastomers, unique properties, 467
Foaming process, simulation of, polyurethane integral skin foams, 959
FRE: *see* Elastomers, filler reinforced

G

Glass fiber-epoxy composites, unidirectional, impact energy absorption, 502
Glycol components, unsaturated polyester and, 54

H

Humidity, pressure sensitive adhesive and, 778

I

Impact conditions, shear deformation, 250
Impact energy absorption, unidirectional glass fiber-epoxy composites, 502
Impact fracture, semi-ductile polymers, 841
Injection molding
cavity filling and fiber orientation, glass fiber-filled thermoplastics, 1001
filled thermosets, optimal thermal design for, 608
packing stage, pressure build-up during, 772
phase separation effects, thermoplastics, 395
polymers, volumetric effects of, 271
reinforced plastics, 968, 980
simple dynamic models, 714
transparent polyurethane, 19
Instrumented impact testing, glass reinforced polypropylene, 903
Interpenetrating network, elastomeric emulsion crosslinked, capillary extrusion of, 257
IPN: *see* Polymer network

J

Jute, reinforced unsaturated polyester resin, binders for, 618

K

Kevlar 29, fibers, creep of, 182

L

Laminar shear mixing, reaction injection molding, 1
Lower critical solution temperature, high pressure, separating polymer solutions, 1088
Lubrication approximation, calendering analysis without, 6

M

Macromolecular systems, thermodynamic properties of, polymolecularity effects, 1118
Maleic acid, polyamides, synthesis and rheological study, 751
Melting, polymers, single-screw extruder, 585
Melt strength, polyethylenes, 279
Melt viscosity
polymer blends, 1017
pressure effects, 655
Membrane processes, phase diagrams, 1074
Methyl methacrylate, free-radical polymerization, tubular reactors, 212, 232
Methyl methacrylate styrene copolymer, mechanical and thermal properties, 1164
Microrheology, polymer blending, 1041
Models
mathematical, melting of polymers, single-screw extruder, 585
simple dynamic, injection molding, 714
Molding compound, bulk, reinforced plastics in injection molding, 968, 980

N

Natural rubber blends, melt flow behavior, 630
Newtonian fluid, flow, spiral disc extruder, 589
Non-Fickian sorption process, moisture diffusion in epoxy resin, 521
Non-Newtonian fluids, extrusion dies for, inertia and gravitational effects, 570
Nucleation theory, Ehrenfest thermodynamic transitions, 1097
Nylon 6
anionic, polymerization and crystallization, 425
binary alloys of, 1124
Nylon 6,6: *see* Poly(hexamethylene adipamide)

P

Phase behavior studies, system polystyrene-polybutadiene-chloroform, 934
Phase diagrams
aqueous polymer/surfactant systems, 1110
polymer blends, containing block copolymers, 1103
Photocurable materials, thermal analysis, 931
Photoresists, thermal analysis, 931
Planar mechanical properties, enhanced, ultra-high molecular weight polyethylene, 494
Plastics
practical specimens, servo-hydraulic testing system and, 923
reinforced, injection molding, 968, 980
toughened, brittle particles and ductile matrix, 741
Plastics industry, history of, 446
Polyacetylene, structures of, 635
Polyamide
engineering thermoplastic, semicrystalline reinforced, 942
maleic acid, synthesis and rheological study, 751
rubber-modified, preparation during caprolactam polymerization, 193
Polyarylate-polycarbonate blends, tensile properties of, 178
Poly(aryletherketone), drawing through conical dye, 355
Poly(2,5-benzoxazole), molecular orbital conformational energy calculations, 965
Polybutadienes, cis- and trans-, chlorinated, configuration and conformation of, 1026
Poly(butylene terephthalate)
molecular weight, end-group concentrations and, 389
solid-state polymerization, 1145
Polycaprolactone, chemical degradation, γ-radiation effects, 318
Polycarbonate
bisphenol-A-, impact strength and melt viscosity, 896
blend with polyarylate, tensile properties of, 178
flame-retardant, Cole-Cole method, 105
life expectation of, 535
residual stresses and toughness, exposure to environmental conditions, 577
response to dynamic contact loading, 339
Polycarbonate copolyester blend, transparent, 462
Polycarbonate resin, history and manufacture, 458
Poly(2,6-dimethyl-1,4-phenylene oxide) blends, studies of, 1048
Poly(dimethylsiloxane), thermal conductivity of, 70
Poly(dimethylsiloxane)-bisphenol-A-polycarbonate, damping modulus studies, 113
Polyester
nucleation of crystallization, 348
resin, jute-reinforced unsaturated, binders for, 618
unsaturated, based on poly(ethylene glycol), 54
Polyester ether, branched, properties, 851
Polyester foam, compatibilization of, 553
Poly(etheretherketone), Victrex, 474
Polyether-polyurethanes, segmented, structure-property relations, 834
Poly(ethersulfone), Victrex, 474
Polyethylene
extrudability, melt rheology and, 690
fatigue crack growth, 313
high density, crystallinity, 562
low-density, simulation of, 37
melt strength and extensibility, molecular structure effects, 279
recovery, from imposed bend, 48
silane-grafted moisture-crosslinked, properties, 857
ultra-high molecular weight
enhanced planar mechanical properties, 494
mechanical properties of, 747
Poly(ethylene glycol), unsaturated polyester based on, 54
Polyethylene melt, thermal conductivity in, shear dependence of, 70
Poly(ethylene terephthalate), crystallization, nucleation of, 348
Poly(hexamethylene adipamide), tensile yield in, 65
Polymer blends
microrheology, 1041
permeability barriers of controlled morphology, 483
phase diagram containing block copolymers, 1103
thermosetting-thermoplastic, compatibilization of, 553
viscosities, model, 1017
Polymer film
extrusion, oriented structure formation

during, 1179
heat treatment, bubble formation mechanism, 75
solvent coated, minimizing curl upon drying, 367
Polymeric melt, flow of, short tubes, 264
Polymeric systems, ferrite-filled, surface treatment effects, 807
Polymerization
acetylene, kinetics of, 635
anionic, ϵ-caprolactam, 1155
anionic nylon 6, 425
batchwise radical chain, minimum end time policies for, 987
bulk, reaction kinetics of polyurethane-polyester interpenetrating polymer network, 951
emulsion, simulation of particle size distribution, 57
free-radical, methyl methacrylate, tubular reactors, 212, 232
multifunctional step growth, cascades of reactors, 332
solid-state, poly(butylene terephthalate), 1145
Polymer networks
Berkeley kinetic network model, 782
dicyanate semi-interpenetrating, high performance, high temperature plastics, 804
interpenetrating, 488, 758
polyurethane-polyester, reaction kinetics, 951
recent advances, 517
interpenetrating bimodal, 824
polyurethane acrylic copolymer interpenetrating, dynamic mechanical properties of, 157
Polymers
ductile, surface embrittlement, 207
electromagnetic heating pattern, smoothing, 289
equations of state, 1139
injection molding of, volumetric effects, 271
liquid crystalline, molecular orientation and morphological texture, 888
melting of, single-screw extruder, 585
molecular-weight distribution, dynamic melt viscoelasticity, 122
molten
calender bank, 118
thermal degradation during shear measurements, 362
nonlinear response, periodical sudden loading and unloading, 604
reactions caused by stress, 129
reactive processing, rheokinetics for, 301
semicrystalline, tie chain length distribution, 828
semi-ductile, impact fractures of, 841
solid-phase flow behavior, 323
structure, process-property control, 864
sulfur dioxide in, 164
thermal expansivity, temperature dependence, 1135
Polymer self-diffusion data, empirical correlation, dilute and semidilute concentration regimes, 947
Polymer solutions, separating, high pressure lower critical solution temperature, 1088
Polymer structural matrix, heat storage module, 406
Poly(methyl methacrylate)
impact and compact tension fracture properties of, 1035
response to dynamic contact loading, 339
Poly(4-methylstyrene), studies of, 1048
Polymolecularity, influence on thermodynamic properties, macromolecular systems, 1118
Poly(oxyethylene-styrene-oxyethylene), synthesis, triblock copolymers, 32
Polyphenylene ethers, alloys and, 477
Poly(p-phenylene benzobisthiazole), fibers, tension during drying, 284
Poly(p-phenylenebenzobisthiazole) fiber, spinning of, structure formation, 1093
Polypropylene
crazing in, 98
rubber particle size dependence of, 643
filled with calcium carbonate, mechanical properties of, 1069
flame retardation, 434
glass reinforced, instrumented impact testing, 903
isotactic, coextrusion with atactic polystyrene, 431
isotactic film, axial and off-axis yield behavior, 875
Polystyrene
atactic, isotactic polypropylene attained by coextrusion, 431
rheological and processing characteristics, 188
Polystyrene foam, compatibilization of, 553
Polystyrene-polybutadiene-chloroform, phase behavior studies, 934
Polyurethane
integral skin foams, simulation of foaming process, 959
transparent, injection molding, 19
Polyurethane-acrylic, interpenetrating polymer networks, dynamic mechanical properties of, 157
Polyurethane foam, compatibilization of, 553
Polyurethane-polyester, interpenetrating polymer network, reaction kinetics in bulk polymerization, 951
Poly(vinylchloride)
chlorinated: *see* Chlorinated poly(vinylchloride)
fatigue of, craze initiation, crack growth, and lifetime trends, 170
miscibility, changes in chemical structure and, 1056
Powder particle fusion, mechanical properties of ultra-high molecular weight polyethylene and, 747
Process-property control, polymer structure, 864
PVC: *see* Poly(vinylchloride)

R

γ-Radiation, polycaprolactone, 318
Radiation-degradation susceptibility studies, vinyl terpolymers, 83
Reaction injection molding
continuous process, 541
laminar shear mixing in, 1
Reactive processing, continuous, 541
Reactor, isothermal, continuous flow, stirred tank, multifunctional step growth polymerization, 332
Reinforced plastics, processing, multiscrew compounders, 497
Resin
engineering, history and development, 446
epoxy
cured system, temperature-dependence of, 812
moisture diffusion in, 521
response to dynamic contact loading, 339
rubber toughened, 1148
water in, 529
polycarbonate, 458
polyester, jute-reinforced unsaturated, binders for, 618
thermoplastic polyester, for containers, 453
Rheokinetics, reactive processing of polymers, 301
Rheology, melt, extrudability of polyethylenes and, 690
RIM: *see* Reaction injection molding
Rubber
brittle particles, toughened plastics, 741
multiphase processing, 729
particle size, crazing in polypropylene, 643
toughened, epoxy resins, 1148

S

Semicrystalline polymers, tie chain length distribution, thermodynamic prediction of, 828
Servo-hydraulic testing system, testing of practical plastic specimens, 923
Shear deformation, impact conditions, 250
Shear rate, temperature and, bulk molding compound and, injection molding, 968
Silane, grafted polyethylene materials, properties of, 857
Silicone, unique properties, 467
Single-screw extruder
melting performance, cross-channel flow effects, 412
mixing studies, 305
Slit die viscometer, experimental study and analysis, 765
Spiral disk extruder, evaluation of, 295
Spring-back, imposed bend, polyethylene, 48
Styrene-maleic-anhydride copolymer blends, impact strength, melt viscosity and, 896
Styrene monomer, emulsion polymerization of, simulation of particle size, 57
Sulfur dioxide-polyarylate system, evidence of dual mobility, 164

T

Temperature
dependence, thermal expansivity in polymer, 1135
pressure sensitive adhesive and, 778
shear rate and, bulk molding compound and, injection molding, 968
Tensile yield, nylon 6,6, 65
Tension fracture properties, poly(methyl methacrylate), 1035
Terephthalic acid, ethylene glycol and, esterification process between, model, 788
Terpolymers, vinyl, radiation-degradation susceptibility studies, 83
Thermal analysis, photocurable materials, 931
Thermal conductivity, polyethylene melts, 70
Thermal degradation, shear measurements, molten polymers, 362
Thermal storage module, development of, 406
Thermoplastic, polyamide engineering, semicrystalline reinforced, 942
Thermoplastic polyester resins, containers, 453

Thermoplastics
glass-bead, phase separation effects in processing, 395
glass-fiber-filled
cavity filling and fiber orientation in injection molding, 1001
phase separation effects in processing, 395
rheological properties, 1001
high performance engineering, Victrex, 474
Thermosets, filled, injection molds for, optimal thermal design, 608
Tie chain length, distribution, semicrystalline polymers, 828
Tubular reactor, methyl methacrylate, free-radical polymerization of, 212, 232

V

Vinyl terpolymers, radiation-degradation susceptibility studies, 83
Viscoelasticity, dynamic melt, polymer molecular-weight distribution, 122
Viscometer, slit die, experimental study and analysis, 765
Void, formation, extruded bars, 91
